Cloud Connect /

The use of cloud technology is nearly ubiquitous throughout enterprises across all industries. According to RightScale, organizations are leveraging 3.4 public clouds on average and 50 percent are spending more than 1.2 million annually on their public cloud. Whether you are just starting your cloud journey or already putting data in one or multiple clouds, it's important to continue to evaluate your cloud performance, costs, and security to make sure you're getting the best out of your service. With an end-to-end solution using FiberLight transport plus the private connection to cloud providers, your business can experience higher performance, cost savings on egress fees, and increased data security—allowing your company to focus on business goals instead of spending time managing your network and cloud connections.

Key Benefits:

Increase Performance

Increase operational performance and efficiencies with a faster, more reliable, and private connection to your public cloud provider.

Optimize Financial Resources

Save up to 77 percent on egress fees from cloud providers when switching to a private connection.

Streamline Network Management

Focus more on your business operations with a single vendor managing your transport and cloud needs.

Maximize Security

Protect sensitive and regulated data with a more secure, dedicated path to your public cloud provider.

Scale for Growth

Easily increase bandwidth to support your data needs through the cloud now and into the future.
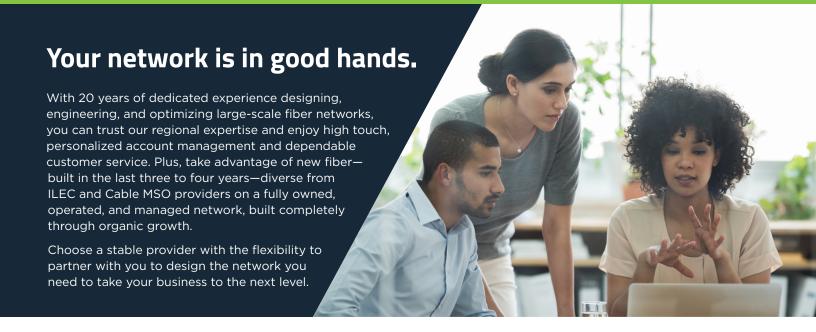

Improve BCDR

Protect your data in the cloud with a multi-cloud and or geo-diverse solution with access to cloud destinations throughout the U.S. and around the world.

High-Touch Customer Service

Easily access top executive and field resources, offering a more personalized experience for delivering ongoing account management and service maintenance.
