

ENNI

Ethernet External
Network-to-Network Interface

Today's network operators and large enterprises need end-to-end solutions to serve distributed customers. The inability to serve customers outside of network footprints or due to uncommon meet-me location requests can result in real revenue loss.

With a more reliable Ethernet ENNI on a protected core infrastructure from FiberLight, including interconnections available outside of traditional carrier hotels, extend your network where you need it so you can focus on increasing customer relationships and satisfaction.

Key Benefits

Seamlessly Extend Your Network

Expand service to customers outside your footprint by utilizing interconnections where your customers need them, not where the carrier hotels dictate. One ENNI can cover an entire regional market: for example, a Dallas ENNI covers the state of Texas, and Ashburn covers metro Northern Virginia, Maryland and DC.

Offer More Readability

Provide increased uptime with Ethernet circuits running on a protected core in FiberLight metro aggregation route (MAR) markets versus linear unprotected legacy ENNI providers such as Cable MSOs.

Increase Speed to Market

Eliminate the need for multiple switch ports and physical crossconnects at a meet-me point and bring solutions to market faster.

Access Fiber Building Lists

Enable your sales teams with 78,000 pre-qualified near-net building lists available via realtime Connected2Fiber API or flat file with quarterly updates.

- Standard ENNI options at 1GE and 10GE – 100GE with ICB availability
- Ethernet end links from 100Mbps to 10GE
- Connected to 165 data centers, cloud service PoPs, and carrier hotels
- Willing to construct new fiber routes to reach additional buildings, towers, and other locations
- Internal FiberLight teams dedicated to BAA acquisition

Your Network is in Good Hands.

With 20 years of dedicated experience designing, engineering, and optimizing large-scale fiber networks, you can trust our regional expertise and enjoy higher-touch, personalized account management and dependable customer service. Plus, take advantage of new fiber—built in the last three to four years—diverse from ILEC and Cable MSO providers on a fully owned, operated, and managed network, built completely through organic growth. Choose a stable provider with the flexibility to partner with you to design the network you need to take your business to the next level.
