

Enhanced DIA

Dedicated Internet Access

As traffic traversing the internet continues to increase, businesses are requiring a more scalable, reliable, high performing dedicated internet service to optimally run their operations between their LAN and the public internet. Whether you're a small to medium size business or a CLEC who resells DIA, finding a transport provider with a reliable network, dependable customer service, and a low latency connection to the internet is vital to keeping your business running smoothly. FiberLight provides increased reliability, enhanced performance, and diverse and protected routes so your business can focus on satisfying customers rather than managing a slow, unreliable internet service.

Key Benefits

Increase Reliability

Run your business without interruption on a fully dedicated and diverse fiber connection with service backed by multiple tier 1 internet providers enabling more efficient IP routing, reducing latency, and ensuring traffic reaches its intended destination quickly.

Deploy Faster Speeds

Choose the bandwidth to support your business now and into the future with easily scalable bandwidth options up to 10 Gbps.

We blend services from multiple tier one internet providers to ensure constant connectivity over diverse fiber.

Enable BCDR

Increase uptime and productivity via protected IP gateways and upstream access to the internet with automatic network failover that routes traffic to the nearest geographic gateway and market.

Experience High-Touch Customer Service

Easily access top executive and field resources, offering a more personalized experience for delivering ongoing account management and service maintenance.
