

How to API with FiberLight

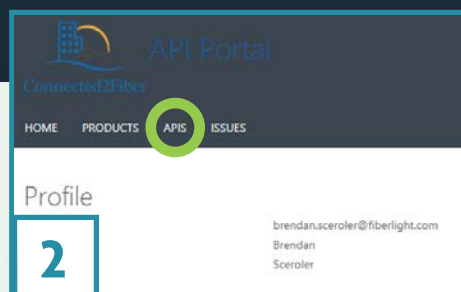

FiberLight offers the ability to provide API connections to enable automation of information between our platforms. To enable APIs FiberLight uses third-party platform through Connected@Fiber (C2F) for serviceability and product pricing API calls.

Sign NDA or MSA

Work with FiberLight account team to sign an NDA or keep one on file as part of the contracting process. Additional NDA with C2F can be put in place if required.

Sign Up for Login on C2F & Access API Info

Utilize Account team to coordinate Initial API review meeting with FiberLight finance team and Connected 2Fiber support resources.

Gain Access

Following the call, set up and test your API with support from the FiberLight Finance Support Team and account manager to confirm results meet expectation.

Test API & Confirm Results

Have account team arrange a call with C2F to test API. For additional API resources and documentation visit C2F [here](#)

Maintain Updates

Maintain ongoing rate table updates through out the year. After signing up for the developer portal, the "Connected World Availability API v3" is the demand engine API utilized for interacting with FiberLight's building serviceability, products, and pricing.
